I've found some 8/11/80 "Metallic Sludge" analysis results. The
follow results are mg/Kg, dry weight.

Sample date 7/16/80

Cd 10
Cr 250,000
Cu 100
Ni 1,000
Pb 280
Zn 150,000
Fe 45,000
Hg < 1
CN 2100

The description of sampling site states "Excavated Area - North
Boundry".

Unfortunately, I can't find any other correspondence related to
this sampling and analysis event.

I'll fax these two analysis report sheets to you, but I don't
know how well they will transmit. Let me know if they are
illegable or if you have any other questions.

Talk to you soon,
Jim
